Share Virtual Discovery Environment in Linked Data (SHARE-VDE) State-of-the-art

Tiziana Possemato

The project and its goals

What is SHARE-VDE?

SHARE-VDE is a library-driven initiative to establish an effective working environment for the use of linked data by libraries within a global context.

Library data are enriched with additional information and relationships, and bibliographic and authority data are converted in linked data.

A virtual discovery platform with the three-layered structure of the BIBFRAME data model is created to simplify the way in which that data is consumed.

Who is responsible for it?

SHARE-VDE is a collaborative endeavour based on the needs of libraries, developed by:

Casalini Libri, provider of bibliographic and authority data as member of the Program for Cooperative Cataloguing;

@Cult, provider of ILS, Discovery tools and Semantic web solutions for the cultural heritage sector;

with initial input and active participation from 16 North American Research Libraries.

SHARE-VDE is driven by the library community and influenced by the vision of the LD4P initiative.

SHARE-VDE overall goals

Enrichment of MARC record with URIs

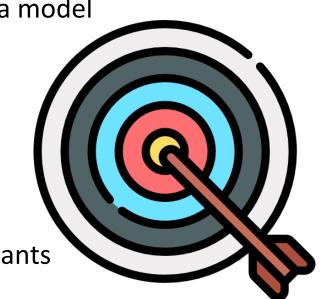

Conversion from MARC to RDF using the BIBFRAME vocabulary (and other additional ontologies as needed)

Data publication according to the BIBFRAME data model

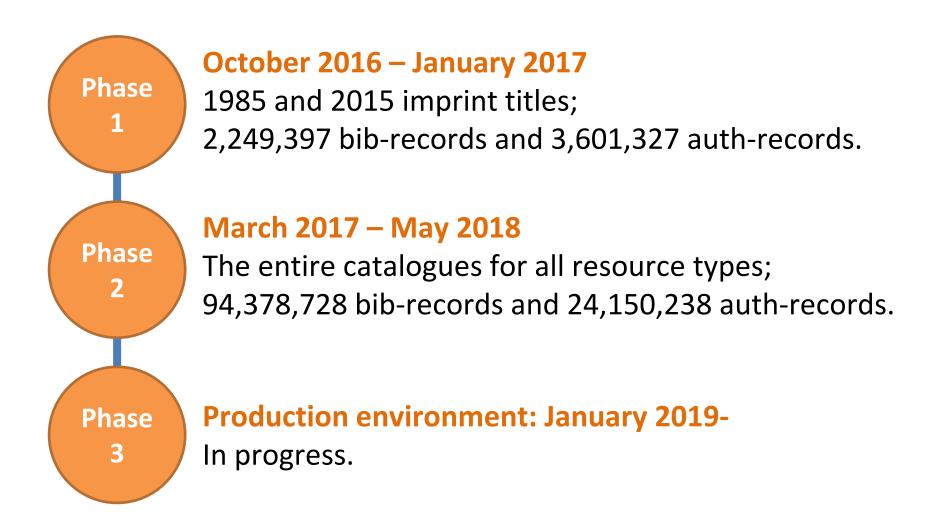

Batch/automated data updating procedures

Batch/automated data dissemination to libraries

Progressive implementation of use cases, with priorities defined by the SHARE-VDE participants

SHARE-VDE phases

The projects of the Share-VDE family are promoted by the libraries to establish procedures for the identification and reconciliation of entities, the conversion of data in Linked Data and the creation of a virtual discovery environment based on the three-level structure of the BIBFRAME data model.

SHARE-VDE (Virtual Discovery Environment) is a collaborative endeavour based upon the needs of libraries, formulated by Casalini Libri and @Cult, with initial input from 16 North American University Libraries. The initiative is governed by the library community.

SHARE-Art is prototype for Kubikat group, the art history libraries of the Max Planck Institut (Zentralinstitut für Kunstgeschichte of Munich, Kunsthistorisches Institut of Florence, Hertziana Library in Rome and the Center Allemand d'Histoire de L'Art of Paris). One of the peculiarities of this project is to foresee the integration of the photo library and to build structure that will allow end-users the possibility of moving between the library and the museum collections.

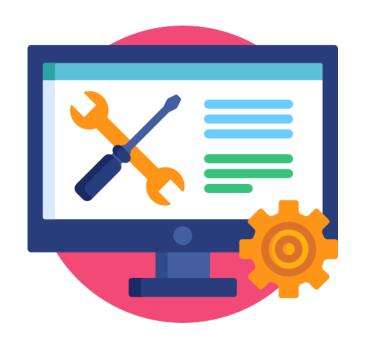

SHARE-Music, is an experimentation in the field of music with the participation of the Bayerische Staatsbibliothek of Munich, the Library of Congress and Stanford University. This project addresses very specific aspects such as the definition and management at various levels of the Work (Work) and the application of the PMO ontology (Performed Music Ontology).

SHARE-VDE core technology: the LOD Platform

The LOD Platform

The LOD Platform is a highly innovative technological system for handling bibliographic catalogues and transforming them in Linked Open Data.

The LOD Platform uses BIBFRAME as its ontology but is able to combine and add other ontologies and data models as required by each specific project.

The LOD Platform

The system allows:

- data analysis and management, to identify and group the entities (clusterization process);
- data enrichment through links with external projects;
- bibliographical and authority data conversion in RDF (Resource Description Framework, the standard model by the W3C for LOD), using vocabularies and ontologies;
- publication of the dataset in LOD on triplestore (RDF);
- user-friendly ways of finding data, through a discovery portal with navigational tools based on BIBFRAME and other data models (FRBR/LRM...).

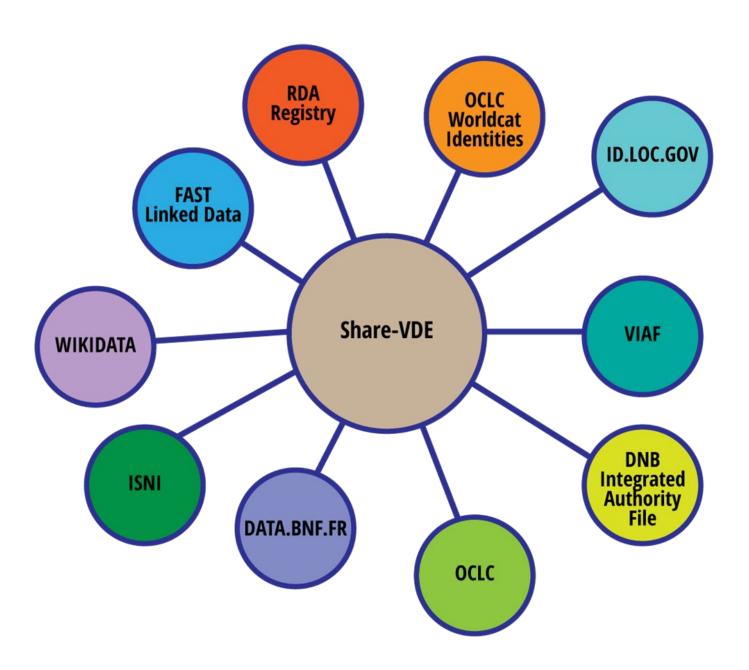

The LOD Platform

Components of the technological architecture:

- AUTHIFY, RESTFul module that provides bibliographic and authority search services and full text of external datasets, mainly related to Authority files (VIAF, Library of Congress Name Authority file...) but also extendable to other types of datasets.
- CLUSTER KNOWLEDGE BASE, on PostgreSQL database, is the result of data identification, enrichment, and clusterization processes.
- LODIFY, RESTFul module that automates the entire process of data conversion in RDF format;
- BLAZEGRAPH and/or STARDOG, two triplestores (the first open source; the second commercial) for storing RDF files;
- PORTAL SKIN, the personalized portal on which data is published.

SHARE-VDE Transformation Council

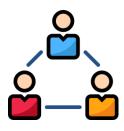

«The SHARE-VDE Transformation Council's role is to provide insight and analysis of the MARC to BIBFRAME transformation to make recommendations for improvements based on member library data analysis, and project documentation. Initial recommendations are based on Phase 2 deliverables, but the work of the team will be ongoing into the foreseeable future.»

There are 4 sub-committees focusing on specific areas:

- Work Identification Working Group
- Authority/Identifier Management Services Working Group
- Cluster Knowledge Base Interaction/Editor Working Group
- User experience/User Interface Working Group

Work Identification Working Group

- Reviews the <u>SHARE-VDE Work Clustering Outline</u> and submits feedback on potential improvements or optimizations;
- reviews the use of primary resource identifiers in the SHARE-VDE data set and provides feedback as appropriate;
- engages with the PCC to identify and/or develop best practices for use of these identifiers in BIBFRAME and MARC data.

Authority/Identifier Management Services Working Group

- Defines guidelines and best practices for Authority/Identifier management in the linked data environment;
- takes into consideration a variety of different workflows and use cases.

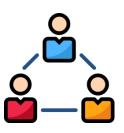

Cluster Knowledge Base Interaction/Editor Working Group

- An essential part of the MARC to RDF conversion process is the maintenance of metadata that have been produced and registered on the Cluster Knowledge Base (CKB);
- the group analyses how libraries interact with the CKB and their use of the tools for modifying (correcting / enriching), deleting, merging and separating clusters;
- the same approach will be applied on the data originally created in BIBFRAME.

User experience/User Interface Working Group

- Re-design Share-VDE user interface to respond to both patrons and library staff requirements and expectations;
- reflect the components of the Share-VDE data model infrastructure;
- provide an intuitive user experience.

Collaborations

For LD4P cohort members:

- conversion of library data in RDF
- data updating

Contribute data to the central ISNI database used for enrichment and reconciliation

William Shakespeare

William Shakespeare (bapt. 26 April 1564 – 23 April 1616)[a] was an English poet, playwright and actor, widely regarded as the greatest writer in the English language and the world's greatest dramatist.[2][3][4] He is often called England's national poet and the "Bard of Avon".[5][b] His extant works, including collaborations, consist of approximately 39 plays,[c] 154 sonnets, two long narrative poems, and a few other verses, some of uncertain authorship. His plays have been translated into every ...— Wikipedia
