Software for the Conservation Department:

BiblioConserv© - Conservation Documentation System

- Upgrade of Digital Infrastructure of the NLG. (2015-2017)
- Acquisition of core software for a Conservation Documentation System (December 2017)
- Customization and development for the NLG (2018)
- Fully operational since 2018

Documentation of Objects

- Description of bookbinding features
- Material identification
- Identification of techniques
- Documentation of the state of preservation
- Documentation of conservation treatments

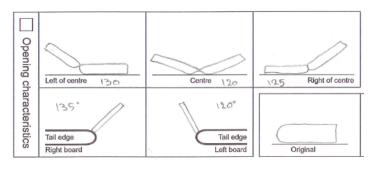

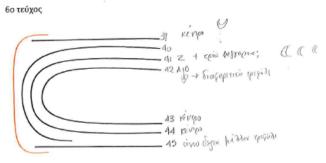

Documentation of Objects

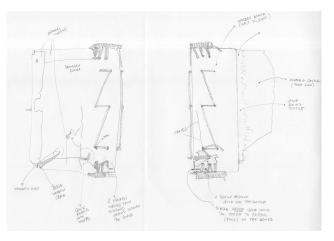

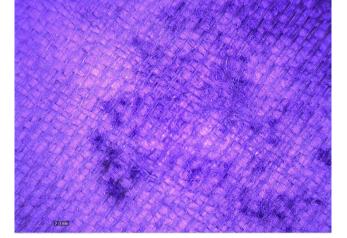

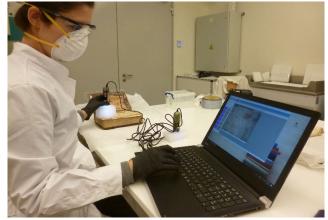

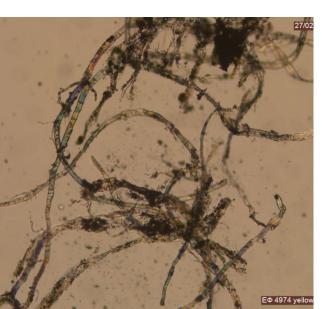

Documentation of Objects

Research and Analysis

- Stereomicroscopes (LEICA. LYNX- EVO)
- Optical microscopes (LEICA)
- UV and IR microscopes
- Spectrophotometer readings
- PH meter

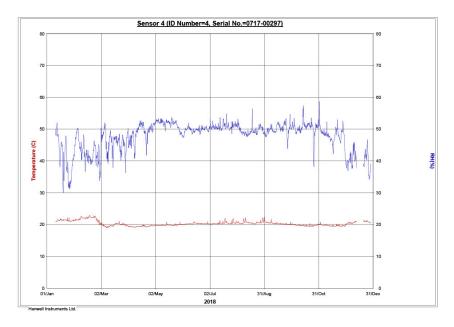

Documentation of Preservation Activities

- Dataloggers (T, RH and Lux)
- Pollutant readings (Building Management Systems)
- VOCs (Volatile Organic Compounds)

Workflow for the conservation of objects at the studio

Collaboration with NLG departments:

- Creating request tickets towards conservation
- Electronic signing of deliveries of objects
- Tracking of the status of objects under conservation treatment
- Log of documentation and history of treatments on objects
- List priorities of the collections for conservation
- Distribute objects for conservation from different collections
- Optimize available man-hours for conservation work on different collections

2018 2019

- Documentation of materiality
- Documentation of state of preservation
- Workflow
- Documentation of conservation treatments
- Manage tasks
- Create assignments
- Reports on conservation work
- Statistical analysis
- Research on the archaeology of bookbinding

https://www.biblioconserv.com/

double-sequence sewing

Preferred label:

double-sequence sewing

A bookblock which is sewn unsupported in two halves starting from each board, with the two halves tied together down the centre of the spine. This structure is typical of many genuine Greek-style bindings, and allowed the binders to create acute joints along the spine edge of each board.

Assessment Manual (2004)

Data Analysis

...indicative research:

- Research on bookbinding features
- Grouping of books and identification historic bookbinding workshops
- Extent and severity of damages that are most common in the collection
- Grouping of damage types and optimization of treatments
- Range of treatments performed more frequently by the conservators
- Numbers and types of objects conserved each year from different collections

Future Development and Upgrades

Linked Data

- Linked terminology
- Established terminology in English and Greek on the conservation of books and archival material
- Development of tools on recording watermarks and bookbinding decoration
- Link to environmental control and datalogging system

Future Development and Upgrades Linked Data

Ligatus is part of the <u>University of the Arts</u>
<u>London</u> undertaking research on
documentation in historical libraries and
archives.

Linked Conservation Data

Linked Conservation Data is a new project funded by the UK's Arts & Humanities Research
Council on Conservation Documentation. It establishes a Network to improve the
dissemination of conservation records and increase the capacity of the profession for
sharing observations and learning from each other's practice. We welcome participation from
individuals engaged in the conservation and preservation of cultural heritage in all Network activities
including webinars, workshops, and calls. All activities will be open.

Main project website: https://www.ligatus.org.uk/lcd/

Linked Data

The Network will investigate current web technologies known as Linked Data to enable accessibility to conservation records. Linked Data technologies allow the publication of records/data in such a way that they can be linked to other resources and enable re-use and discovery. By re-using conservation data, researchers can extract better conclusions because they have access to larger samples and material evidence from expert observations. We believe this will lead to transformative research projects in a) conservation, for assessing the impact of methods and materials, b) history/archaeology, for enabling provenance studies based on material evidence and c) curation/museology, for enabling new ways of engagement based on rich content. By re-using conservation data, memory institutions will be able to tell new stories about their collections to the wider public and engage with audiences through material evidence of objects.
